GVISION Dual-Controller Offers Serial or USB Touch Interface **Flexibility provide VARs with necessary alternatives for touch screen solutions**

Lake Forest, CA (August 2, 2005) – GVISION USA Inc., a leading manufacturer of LCD displays announced today the availability of their dual touch controller option for a variety of desktop and open frame monitors designed for ELO resistive touch screen applications.

The innovative GVISION feature allows for either a serial RS-232 or universal serial bus (USB) connection to the ELO resistive screen. With the recent technology shift to USB devices, GVISION allows distributors to stock less model types and offers resellers the ease of integration that comes with one model type that can incorporate either interface.

“OEM’s can really benefit from the designed-in flexibility for future requirements, system modifications or technology changes, and not have to switch out their current display solution,” explains Paul Olson, GVISION National Sales Manager. “The dual controller allows for a substantial product advantage at an attractive price point.”

GVISION's dual controller is an option for current 10.4" and above LCD displays. GVISION products are available through authorized distribution partners, nationwide. For more information on GVISION and its products, call 1-866-651-9688 or visit the GVISION website at www.GVISION-USA.com.
