

## **Multimedia Open Frame Featured at Kioskcom 2004 New 15" Open Frame Touch Screen Monitor with Video and DVI**

**Lake Forest, CA, April 27, 2004** – GVISION USA Incorporated, Booth #609 at KioskCom 2004, introduces the W5TX 15" open frame multimedia LCD display for kiosk applications. This new series offers video-in (composite and s-video), touch screen, DVI and analog connections in an open frame design. The W5TX is suitable for applications using interactive video for information and entertainment.

“Up until this point our customers had to choose either a touch screen or video input for their open frame units,” said Keddy Chen, General Manager of GVISION USA. He further commented, “Now GVISION’s customer can have both technologies in a single device for a true multimedia experience.”

The W5TX adds the option of using a digital video interface (DVI) connection or an analog connection depending upon the application. The DVI connector is a growing requirement within the kiosk market that ensures long-term input signal compatibility and provides less signal degradation over analog. The W5TX’s open frame design is suitable for placement into a kiosk or custom enclosure with anti-reflective and anti-glare glass as an added option. The front cover is IP 54 compliant.

GVISION USA supplies several large OEMs, VARs, SIs a wide range of LCD products targeting retail POS, kiosk, hospitality, gaming, financial, industrial, and medical applications. The manufacturer has sold over 600,000 display units worldwide. This success is due largely in part to the solid quality, value, and flexibility of GVISION’s products.

Founded in 1999 as a spin-off from a billion-dollar international high-tech company, GVISION USA, Inc. designs and manufacturers a full range of over 100 types of LCD displays products for multiple markets. Today GVISION's largest shareholder is Taiwan Styrene Monomer Corporation, a \$1 billion manufacturer of styrene monomer, p-diethyl benzene and other chemical products. GVISION is committed to offering functionality and versatility with LCD display options ranging from complete touch screens monitors to open frame units. Company headquarters are based in Taiwan, with US operations in Lake Forest, CA.
